📍 Kathmandu, Nepal ✉ [srijanjoshi7@gmail.com](mailto:srijanjoshi7@gmail.com) ☎ 9840538231 📺 [in/joshisrijan](https://www.linkedin.com/in/joshisrijan) 🌐 [srijanjoshi.netlify.app/](https://srijanjoshi.netlify.app/)

## SUMMARY

Enthusiastic and skilled AI/ML practitioner with hands-on experience in building intelligent systems using large language models, fine-tuning, and agent-based architectures. Proficient in Python, NLP, deep learning, and frameworks like Hugging Face Transformers, LangChain, and FastAPI. Developed multiple end-to-end projects, including a personalized AI chatbot for a coffee shop and a character-aware Naruto chatbot with custom fine-tuned models and visualization tools.

## EXPERIENCE

### Python Developer Intern

Treeleaf Technologies

July 2025 - October 2025, Sankhamul-11, Lalitpur

- Worked on Monexa, a financial intelligence system, building backend services using FastAPI and PostgreSQL.
- Implemented loan eligibility checks, EMI calculations and collateral-based evaluations.
- Developed rule-based customer segmentation and embedding based similarity to support personalized recommendations.
- Designed scalable REST APIs with clean architecture and Pydantic based data validation.

## EDUCATION

### BSc. Computer Science and Information Technology (CSIT)

Prime College • Kathmandu, Nepal • 2022 - 2026

## SKILLS

Programming Languages: Python

AI/ML: Machine Learning, Deep Learning, NLP, Generative AI

Frameworks & Libraries: Scikit-learn, TensorFlow, PyTorch, Transformers, Hugging Face, LangChain

Web Development: FastAPI, Flask, HTML, CSS, React

Visualization: Matplotlib, Seaborn, PyVis, Streamlit, Gradio

Databases: MongoDB, MySQL, PostgreSQL

DevOps & Tools: Git, Airflow (basic), MLflow (basic), Google Colab

Other: Web Scraping (Scrapy, BeautifulSoup, Playwright), REST APIs, LoRA, AI Agents

## PROJECT

### News Category Classifier – Web Scraping and LLM Fine-Tuning

[github.com/srijosh/News-Category-Classifier-Web-Scraping-and-LLM-Fine-Tuning](https://github.com/srijosh/News-Category-Classifier-Web-Scraping-and-LLM-Fine-Tuning) • May 2025 - May 2025

- Scraped NPR news data using Playwright and built a labeled dataset across 5 categories.
- Fine-tuned a LLaMA-3.2-1B model for accurate text classification with over 85% train and 69% test accuracy.

- Deployed a user-friendly Streamlit app to input custom text and display predictions with confidence scores.
- **Tech Stack:** Hugging Face Transformers, Playwright, Pandas, Streamlit, Evaluate, Google Colab.

## Coffee Ghar – Conversational Coffee Ordering Chatbot with Smart Recommendations

[github.com/srijosh/Coffee-AI-Chatbot](https://github.com/srijosh/Coffee-AI-Chatbot) • March 2025 - May 2025

- Built an AI-powered web app for ordering coffee with chatbot functionality and smart suggestions.
- **Frontend:** React (Vite) using Tailwind CSS.
- **Backend:** FastAPI with LangChain and custom agents for modular task handling.
- **Multi-Agent System:** Implemented specialized agents using LangChain and Groq's LLaMA 3.3-70B.
- **Guard Agent:** Handles safety checks and intent validation.
- **Order Agent:** Takes structured coffee orders with slot-filling logic.
- **Recommendation Agent:** Uses Apriori-based market basket analysis for personalized suggestions.
- **Details Agent:** RAG-enabled agent with MiniLM embeddings + Pinecone for info retrieval.
- **Classification Agent:** Routes queries to the correct agent using zero-shot intent classification.
- **Prompt Engineering:** Designed custom prompts for CoT reasoning, memory management, and system fallback.
- **Tech Stack:** React, FastAPI, LangChain, Groq, Pinecone, MiniLM, Apriori, Hugging Face, Tailwind CSS.

## Naruto NLP Project – Chatbot, Text Classification, and Theme Detection

[github.com/srijosh/NLP\\_Series\\_Analysis](https://github.com/srijosh/NLP_Series_Analysis) • December 2024 - January 2025

- Built a multi-component NLP system using Naruto data for analytical insights and interactive dialogue.
- **Jutsu Classification:** Collected jutsu data via Scrapy, then fine-tuned DistilBERT to classify techniques into Ninjutsu, Taijutsu, and Genjutsu.
- **Theme Detection:** Applied zero-shot classification (BART-MNLI) on subtitles to identify major narrative themes across the series.
- **Character Network (NER):** Used SpaCy transformers to extract named entities and generate a character co-occurrence graph.
- **Naruto Chatbot:** Fine-tuned Meta LLaMA 3 (8B) with LoRA and 4-bit quantization on Naruto dialogues to generate in-character conversations.
- **Tech Stack:** Scrapy, Hugging Face Transformers, NLTK, SpaCy, PyTorch, PEFT, TRL, Matplotlib, PyVis.

---

## CERTIFICATIONS

### Complete Agentic AI Bootcamp With LangGraph and Langchain

Krish Naik (Udemy) • 2025

- Enabled understanding and building of Agents using Langgraph and Langchain.

### Complete MLOps Bootcamp

Krish Naik (Udemy) • 2025

- Enabled understanding of full ML lifecycle, from experimentation to deployment.

### AI Agents Fundamentals

Hugging Face • 2025

- Focused on building intelligent multi-agent systems using modern agentic frameworks like smolagents, LlamaIndex, and LangGraph.

### Generative AI with LangChain and HuggingFace

Krish Naik (Udemy) • 2024

- Aligned perfectly with my work on the Coffee Ghar project helped me build modular AI agents using LangChain, integrate Hugging Face models.

### **Mathematics for Machine Learning and Data Science Specialization**

DeepLearning.AI (Coursera) • 2023

- Built strong foundational understanding of linear algebra, probability, and optimization essential for model design, training, and evaluation in machine learning workflows.

### **Machine Learning Specialization**

DeepLearning.AI (Coursera) • 2023

- Provided hands-on exposure to core ML algorithms and practical ML workflows, directly contributing to model-building tasks.
